EXPLORING FOR WORLD-CLASS GOLD DEPOSITS IN COLOMBIA AND DEVELOPING A HIGH-GRADE GOLD MINE IN ALASKA

Miranda feels that Colombia has the most potential for new gold discoveries of all South American countries. It is an under-explored frontier jurisdiction that offers companies like Miranda the opportunity to discover outcropping multi-million ounce gold deposits.

Miranda currently has three Colombia prospects:

- Oribella: high-intermediate sulfidation system
- Cerro Oro: disseminated and low sulfidation epithermal system
- Antares: intrusive related gold system

Drill ready targets exist at both Cerro Oro and Antares.

Willow Creek Today

In Alaska, Miranda and Gold Torrent are developing a high-grade gold mine in the Willow Creek district. Historical production (1918-1943) from the district was 660,000 ounces at an average grade of 1.2 ounce per ton gold. Mining ceased during WWII. Gold Torrent will spend the initial US\$10M in development costs (total estimated to be \$16M) to earn a 70% interest in the project. A Pre-feasibility Study and new resource will be announced in 2016 with production possible in 2018. Miranda is also purchasing a 3.3 % NSR.
